- Student ID: 159529
- course code and section: CSC 3324 03
- GitHub username: Vpollyon999
- Repo link: `https://github.com/Vpollyon999/git-session1-Vpollyon999`

1. Repository setup

=>I copied the STARTER folder, renamed it `git-session1-Vpollyon999` and ran `git init`. My `.gitignore` ignores `local.env` and `*.log`, with `!important.log` after it, because Git reads the rules from top to bottom. `git check-ignore -v` shows that `local.env`, `app.log` and `debug.log` are ignored, and `git ls-files` shows that `important.log` is tracked.

2. README and commit history

README

Git & GitHub Assignment 1

- **Name:** Ihssane El Omari
- **GitHub username:** Vpollyon999

A small starter web project used to practice the main Git and GitHub workflow: commits, branches, merging and syncing with a remote repository.

Suggested workflows

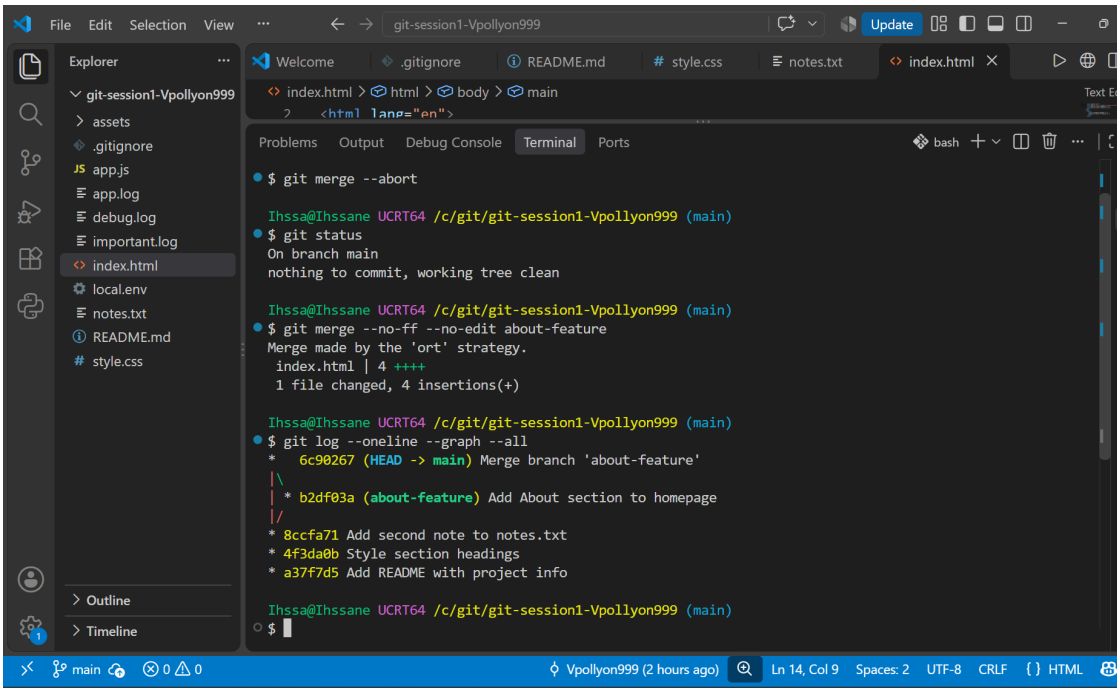

=>My README has my name, GitHub username, a short description, a technologies list, a code block, a link and the banner image. I made small commits with clear messages: `.gitignore`, starter files, README, style change, notes change, About feature, the merge, and a README edit made on GitHub.

3. Selective staging

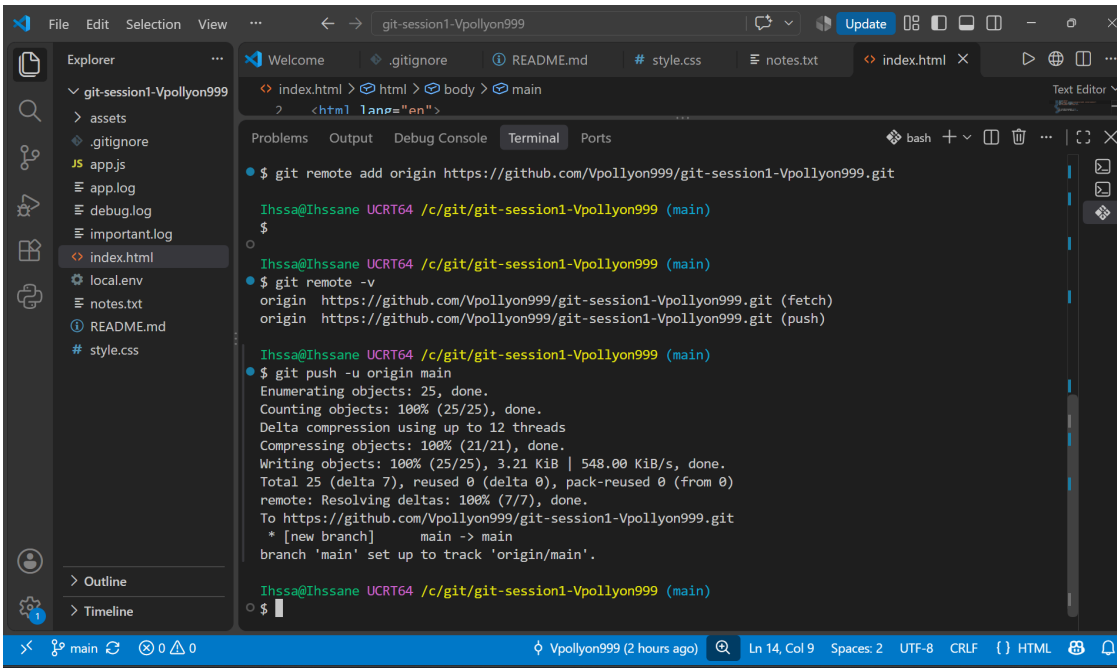

=>I changed two tracked files at the same time, `style.css` and `notes.txt`. I ran `git add style.css` only, and `git status` then showed `style.css` as staged and `notes.txt` as modified but not staged. `git diff --staged` showed only the `style.css` change. I committed `style.css` first, and `notes.txt` stayed modified until I committed it in a separate commit.

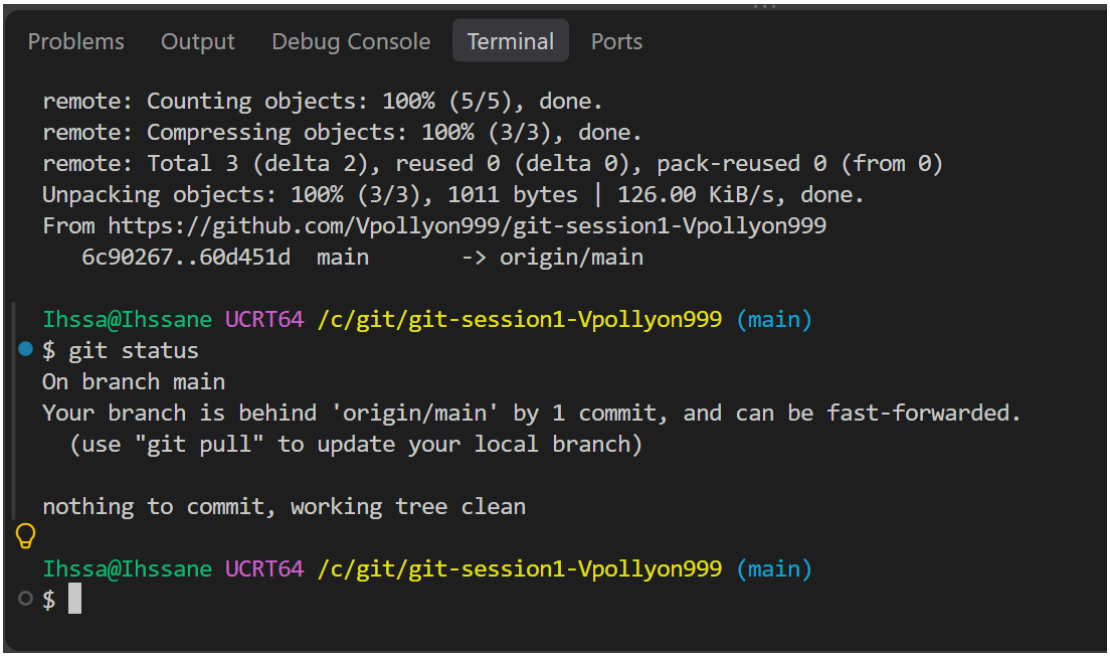

4. Branch and merge

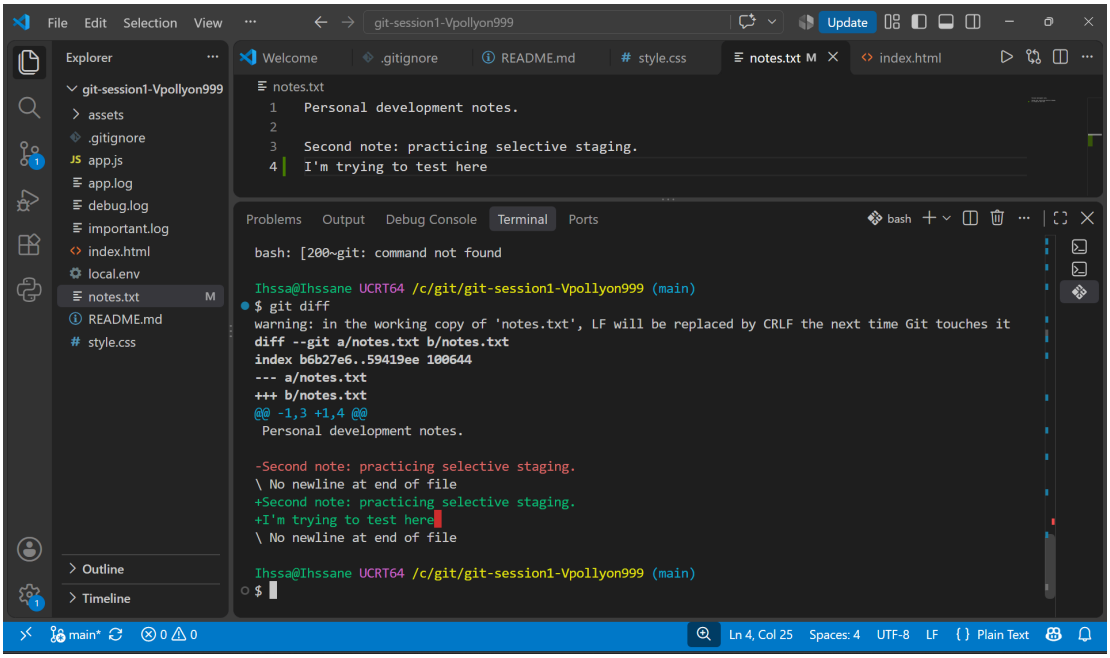

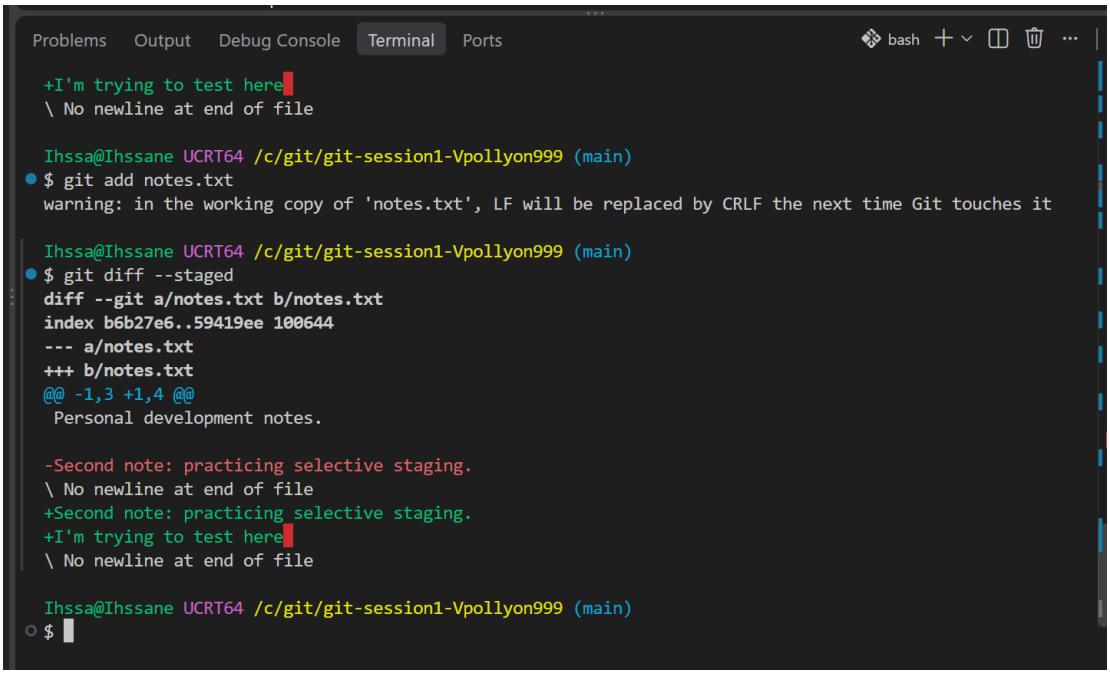

=>I created `about-feature` with `git switch -c`, added an About section to `index.html` and committed it there, so `main` stayed unchanged. I then switched back to `main` and ran `git merge --no-ff --no-edit about-feature`, which creates a merge commit so the branch stays visible in the history.

5. Remote changes

=>A commit saves a snapshot in my local repository only, while a push uploads my commits to GitHub. After I edited the README directly on GitHub, I ran `git fetch`, which downloads the new commit and updates `origin/main` without changing my files. `git status` then said my `main` was behind `origin/main` by 1 commit, and my local README still showed the old text. `git pull` does a fetch followed by a merge, so it also updates my branch and my files, and after it the README showed the new text. I also showed an

unstaged change with `git diff` and a staged change with `git diff --staged`.

6. Fair use of AI

I used Claude, an AI assistant, to help me understand and complete this assignment because Git and GitHub were new to me. I asked it to explain the assignment in simple terms, to give me the steps in order, and to explain what each command does and why. I also asked it to help me read my terminal output when something went wrong, for example when Git opened the Vim editor during the merge and I got stuck, and when pasted commands showed up with strange characters. I ran every command myself, wrote the file contents, README text and commit messages myself, and made the screenshots myself. For the Vim problem, I accepted its suggestion to cancel the merge with `git merge --abort` and redo it with `git merge --no-ff --no-edit about-feature`, and I checked that it worked with `git log --oneline --graph --all`. I verified each step with `git status`, `git diff`, `git log`, `git ls-files` and by checking my repository on GitHub. I understand every command in my submission.

7. Sources and reflection

Sources: Session 1 slides, the assignment instructions and starter files, and Claude (AI assistant) for explanations and troubleshooting.

Reflection: The hardest part for me was understanding the difference between my local repository and GitHub, especially `git fetch` versus `git pull`. It became clear when I edited the README on GitHub, ran `git fetch`, and saw that my branch was behind `origin/main` while my files had not changed yet. If Git behaves unexpectedly, I first run `git status` to see my branch and whether I am ahead or behind, then `git log --oneline --graph --all` to see where my branches are.
